Professional Summary

Software Engineer with 2 years of experience building scalable full stack web and mobile applications using the MERN stack, React Native, and Python-based backend services. Skilled in React.js, Node.js, GraphQL, REST APIs, MongoDB, and performance optimization for enterprise-scale products at Optum (UHG). Immediate joiner, open to full stack and software engineering roles.

Professional Experience

Optum — Software Engineer

(Sep 2023 – June 2025)

- Developed and maintained scalable MERN stack web applications using React.js, Node.js, GraphQL, REST APIs, and MongoDB for enterprise healthcare platforms.
- Contributed to migrating multiple workflows from **REST-heavy architecture to a GraphQL model**, improving data efficiency, reducing over-fetching, and enhancing frontend responsiveness.
- Built reusable full stack modules and React Native mobile features with modular architecture, optimized state management, and scalable component design.
- Improved application performance through **lazy loading, code splitting**, optimized API handling, and efficient rendering strategies under high-traffic conditions.
- Collaborated with frontend, backend, QA, and UI/UX teams in **Agile** environments to deliver production-ready enterprise features.

Skills

Frontend: React.js, React Native, JavaScript (ES6+), TypeScript, HTML5, CSS3, Redux, Context API

Backend: Node.js, Express.js, Python, FastAPI, REST APIs, GraphQL, API Development, Authentication Systems

Databases: MongoDB, PostgreSQL, SQL

Full Stack & Architecture: MERN Stack, Scalable Systems, API Architecture, Microservices, Full Stack Development

Tools & Engineering Practices: Git, Agile, Debugging, Performance Optimization, Responsive Design, Code Reviews

Key Projects

AI-Powered Goal Accountability Platform [\[Live Link\]](#)

- Architected a **full-stack MVP** using Node.js and Express to manage complex user state and a dynamic **escrow transaction system**.
- Developed a core AI integration using the **Gemini API** to programmatically parse and transform user input into structured, quantifiable milestones.
- Built secure **JWT**-based authentication and session management workflows for scalable and reliable user access control.

HealthCare Cost Estimation Platform (Web + Mobile)

- Developed scalable MERN stack web and mobile applications with GraphQL integrations, improving responsiveness and reducing data latency by 40%.
- Contributed to transitioning backend workflows from **REST-based architecture to GraphQL** for optimized data fetching, improved scalability, and reduced frontend over-fetching.

MicroUI Microservice Platform

- Designed a TypeScript-based MicroUI service with reusable modules and shared business logic across 3+ enterprise applications.
- Streamlined API responses through GraphQL schema optimization, cutting duplicate backend calls by 40% and accelerating delivery cycles.

Education: B.Tech, Electronics Engineering — Zakir Hussain College of Engineering and Technology, Aligarh (2019–2023)
